

Airblast & Spray Painting Equipment Spares & Accessories

Dear Sir / Madam

Thank you for your interest in our products. This catalogue outlines the alpha-blast range of airblast equipment, spare parts and accessories.

Everyone involved in the manufacturing or service industries will be well aware of the constant changes in their work place and markets. But the one thing that always remains the same is the search for new and better products at lower prices. To satisfy this demand we manufacture and supply innovative quality products at the lowest possible cost.

Apart from items manufactured by the companies we represent, all our equipment is designed and manufactured by ourselves and through a select team of sub contractors.

Our ambition is to maintain your continual business. To achieve this we will only ever sell quality products. Our products are tried and tested in the field under real life work site conditions. During manufacture all components are test fitted and QC sampled to ensure strict quality control. In the odd event that a product does have a fault, our 1 year warranty will cover its replacement free of charge.

We look forward to the opportunity of working with you for all your requirements for airblast equipment, spare parts and accessories.

Sincerely

alpha-blast

Compact Remote Valve. Lightweight, sturdy and reliable the alpha-blast Compact Remote Valve is an air operated inlet/exhaust valve which is easily retro fitted to existing blast pots in place of other bulky remote control systems and allows quick start and stop response to the remote control handle.

Simple and reliable this control valve is suitable for use with all abrasive and blast pot set up types.

pt.no.	description
301001	Compact Remote Valve
301010	Compact Remote Valve - Repair Kit
301437	Compact Remote Valve Exhaust Pad - Pkt 3

CE

RAV125 Combination Inlet/Outlet Valve. The RAV125 Combination Valve allows for ease of installation and maintenance with only one valve requiring removal for quick change over of respective diaphragms, gaskets and o rings, meaning down time is kept to an absolute minimum. Supplied complete with exhaust silencer.

pt. no.	description
301004	RAV125 Combination Inlet/Outlet Valve c/w Silencer
301011	RAV125 Combination Inlet/Outlet Valve - Repair Kit

CE

RAV125 Inlet Valve. The blasting industries favourite remote control valve. Simple springless design ensures continuous reliable service for thousands of cycles. Removable end caps provides quick and simple access to the valve interior for servicing. Fitment of mini ball valve allows the valve to be deactivated in case of emergency.

Use in conjunction with RAV125 Outlet Valve.

pt. no.	description
301002	RAV125 Inlet Valve
301104	RAV125 Inlet/Outlet Interconnecting Hose

RAV125 Outlet Valve. The blasting industries favourite remote control valve. Simple springless design ensures continuous reliable service for thousands of cycles. Removable end caps provides quick and simple access to the valve interior for servicing. Exhaust air noise is greatly reduced by fitment of silencer to top cover.

Use in conjunction with RAV125 Inlet Valve.

pt. no.	description
301003	RAV125 Outlet Valve
301100	RAV Outlet Valve Manifold

RAV50 Mini Combination Inlet/Outlet Valve. The RAV50 Mini Combination Valve allows for ease of installation and maintenance with only one valve requiring removal for quick change over of respective diaphragms, gaskets and o rings, meaning down time is kept to an absolute minimum. Supplied complete with exhaust silencer.

Same reliable design as the RAV125 Inlet/Outlet Valve but fitted with 1/2" threaded ports for fitment to smaller blast pots.

pt. no.	description
301171	RAV50 Mini Combination Inlet/Outlet Valve c/w Silencer

Combination Valve. This valve is a one piece normally closed air inlet and outlet valve. A short length of blast hose is used for the blow down function that eliminates any abrasive coming into contact with the valve. As no abrasive passes through the valve there is no wear on the valve thus providing years of trouble free service.

Large internal bore reduces air pressure loss through the valve which results in less pressure drop at the nozzle.

pt. no.	description
301005	Combination Valve
301012	Combination Valve - Repair kit

Auto Air Valve. Utilized in conjunction with the Normally Closed Valve, the alpha-blast Auto Air Valve is ideal for use with multiple outlet and bulk blast machines and provides the on/off supply of compressed air to the pusher line to allow independent operation or blow down function.

<u>pt. no.</u>	<u>description</u>
301173	Auto Air Valve - 19mm 3/4" ports
301006	Auto Air Valve - 25mm 1" ports
301007	Auto Air Valve - 32mm 1.25" ports
301108	Auto Air Valve - 38mm 1.5" ports
301225	Auto Air Valve - 50mm 2" ports

RAV Exhaust Silencer. Reduce the noise of the compressed air exiting the blast pot when depressurising. Simple lightweight screw on design allows quick and easy replacement when worn out.

<u>pt. no.</u>	<u>description</u>
301009	RAV Exhaust Silencer

Ball Valve. Full air flow ball valve for reduced pressure loss through fittings.

<u>pt. no.</u>	<u>description</u>
301277	Ball Valve - 32mm (1.25")

Union. Fitted to compressed air piping or abrasive control valve to enable quick and easy removal and dismantling.

<u>pt. no.</u>	<u>description</u>
301258	Union - 32mm (1.25")

Non Return Valve. Prevent back-flow of abrasive from blast pot into inlet / outlet valve that will lead to jamming of the valve. Spring return valve. Large bore size provides full flow of air.

<u>pt. no.</u>	<u>description</u>
301229	Non Return Valve - 32mm (1.25")

RAV Pneumatic. The alpha-blast RAV Pneumatic remote control handle is lightweight, tough and reliable and is used in combination with a blast pot remote valve and up to 40 meters of twinline hose.

The handle will only activate once the operator makes a deliberate two step action to fold down the safety lock and pushes down the lever.

<u>pt. no.</u>	<u>description</u>
301013	RAV Pneumatic Remote Control Handle
301018	RAV Pneumatic Remote Control Handle - Repair Kit
301347	RAV Pneumatic Remote Control Handle Rubber - 10

RAV Electric. When using blast hoses over 40 meters long the RAV Electric remote handle will provide instant activation of the pot remote valve and eliminate the delay encountered with pneumatic handles. The handle operates on 12VDC supply.

The handle will only activate once the operator makes a deliberate two step action to fold down the safety lock and pushes down the lever.

<u>pt. no.</u>	<u>description</u>
301014	RAV Electric Remote Control Handle
301348	RAV Pneumatic Remote Control Handle - Repair Kit

CRV Pneumatic. This non air bleed type deadman handle is recommended for use with the Combination Valve. The internal 3 way normally closed valve provides a fast activation and deactivation response time.

The handle will only activate once the operator makes a deliberate two step action to press in the safety button and push down the lever.

<u>pt. no.</u>	<u>description</u>
301015	CRV Pneumatic Remote Control Handle

Dual Switch. Manufactured from tough polyurethane, the internal wiring is fully encased in silicon sealant after assembly to provide a reliable, long lasting handle.

The Dual Switch electric remote control handle is ideal for use with blast pots with valves configured for blasting and blow down. Ball and safety strap inserted below switch reduces operator fatigue.

pt. no.	description
301219	Dual Switch Electric Deadman Handle
301399	Switch - Dual Switch Deadman
301829	Ball and Strap Assy

Lever Deadman Handle. Pneumatic deadman handle ergonomically designed to reduce operator fatigue. Plastic wedge is inserted into handle to keep it activated.

Wedge is attached to a wrist strap to instantly deactivate the handle if it is dropped.

pt. no.	description
301174	Lever Deadman Handle
301532	Lever Deadman Handle Wedge & Strap Assy
301726	Lever Deadman Handle - Rubber Insert pkt 10

Twinline Hose. alpha-blast Twinline Hose is manufactured from a tough rubber compound suitable for use in the harsh working environment of abrasive blasting.

The Twinline Hose is available in lengths of 10, 20 and 40 meters. For blasting hose lengths in excess of 40 meters we recommend the use of electric remote controls.

pt. no.	description
301022	Twinline Hose - 10m Long
301023	Twinline Hose - 20m Long
301024	Twinline Hose - 40m Long
301098	Extension Twinline Hose - 20m Long
301368	Twinline Hose - 100m Long no fittings

Electric Deadman Controls. Recommended for blasting distances over 40 meters for instant control of the blast pot remote valves. Uses deadman handle 301219 Dual Switch Electric Deadman Handle. Available in 2 versions. 1) Close air and abrasive valve simultaneously. 2) Close air and abrasive valve independently to provide blow down function. Systems available for multi outlet bulk blasters.

301220	Extension Wire 3 Core c/w Joiners - 40m

Abrasive Saver Valve. Reduce abrasive consumption and save money. The alpha-blast Abrasive Saver Valve will save a fortune in wasted abrasive. The screw in plunger permits very accurate adjustment to allow just the right amount of abrasive to the blast nozzle.

The valve is ideally suited to all fine abrasive types, ie glass beads, garnet, aluminium oxide, plastic media, ceramic beads etc.

To reduce maintenance costs the valve internals are made from tungsten carbide, hardened steel and polyurethane.

pt. no.	description
301026	Abrasive Saver Valve
301034	Abrasive Saver Valve - Repair Kit
301137	Abrasive Saver Valve Urethane Sleeve
301136	Abrasive Saver Valve Pipe Nipple 1.5" x 1.25"
301226	Abrasive Saver Valve Pipe Nipple 1.5" x 1.5"
301227	Abrasive Saver Valve Pipe Nipple 1.25" x 1.25"

Note. A full range of spares is available for this valve. Contact us for more details.

Normally Closed Valve. The perfect valve for instant start/stop blast nozzle activation. Ideally suited for multiple outlet blast machines the Normally Closed Valve allows each operator independent blasting on/off control of their nozzle.

The Normally Closed Valve can also be utilised to allow abrasive cut off giving the operator an air only blow down feature, very handy in blast room scenarios to ensure valuable abrasive does not leave the room with the work piece.

pt. no.	description
301027	Normally Closed Valve Tungsten Carbide - 1.25"
301029	Normally Closed Valve Urethane - 1.25"
301036	Normally Closed Valve Tungsten Carbide - Repair Kit
301037	Normally Closed Valve Urethane - Repair Kit
301224	Normally Closed Valve Seal (seat x 3, insert x 1, circle ring x 1, plunger seal x 1)
301131	Normally Closed Valve Pipe Nipple 1.25" x 1.25"
301129	Normally Closed Valve Pipe Nipple 1.5" x 1.5"

Note. A full range of spares is available for this valve. Contact us for more details.

Sand Valve. The alpha-blast Sand Valve is the perfect valve for metering expendable abrasives, ie garnet, crushed glass and minerals slags to the blast nozzle.

The 45 degree free flow design of the valve ensures a consistent uninterrupted abrasive flow which results in higher productivity and less abrasive wastage.

In case of foreign particle blockage the Sand Valve is fitted with a removable clean out plate to provide quick easy access and reduce maintenance downtime.

<u>pt. no.</u>	<u>description</u>
301025	Sand Valve
301033	Sand Valve - Repair Kit

Mini Sand Valve. The Mini Sand Valve is designed for use on smaller sized blast pots and is fitted with 0.5" threaded ports.

Internal plate and stem are manufactured from stainless steel to increase valve life. Precise metering of all abrasive types is achieved with this valve to reduce abrasive wastage.

<u>pt. no.</u>	<u>description</u>
301172	Mini Sand Valve

Pinch Valve. Tough, simple and reliable the alpha-blast Pinch Valve is used to shut off abrasive and air flow in the blast hose as it leaves the abrasive metering valve. Simple pneumatic operation and minimal moving parts ensure reliable continuous operation.

As no abrasive actually passes through the valve there is nothing to wear out or fail. Once the portion of blast hose passing through the valve wears out it is simply replaced with a new section.

<u>pt. no.</u>	<u>description</u>
301101	Pinch Valve

Isolator Valve. The alpha-blast Isolator Valve is a great maintenance time saving device. Fitted above the abrasive metering valve it permits the metering valve to be removed from the blast pot for service, without the need to empty the abrasive from the pot, which saves a huge amount of time.

The alpha-blast Isolator Valve is particularly useful for bulk blasters and multiple outlet blast pots as it allows each individual abrasive metering valve to be removed from the pot without affecting the other outlets. Fitted with 1.5" ports to ensure unrestricted abrasive flow.

<u>pt. no.</u>	<u>description</u>
301217	Isolator Valve

Grit Metering Valve. Fixed orifice abrasive metering valve designed specifically for use with steel grit. Heavy duty cast iron housing and synthetic rubber insert.

Complete with threaded hose connector. 1.5" threaded ports.

<u>pt. no.</u>	<u>description</u>
301805	Grit Metering Valve

Whisker Blaster is a pneumatic tool designed for small repairs and touch up work. Fitted with carbon steel or stainless steel whiskers depending on work requirements.

The the high speed rotating whiskers impact the surface to simultaneously clean and profile the surface. The tool can provide a profiled finished similar to abrasive blasting.

When fitted to external dust collector the Whisker Blaster provides totally dust free operation.

pt. no.	description

Suction Cabinet Abrasive Metering Valve. Mounted below cyclone or cabinet hopper to regulate flow of abrasive to suction blast gun. Adjustable bolt with locking nut. Allows abrasive to be easily drained from cabinet or cyclone.

1" threaded ports. 3/8" hose tail.

pt. no.	description
401105	Suction Cabinet Abrasive Metering Valve

Blasting Light. The perfect solution for blasting in areas with poor visibility, such as inside and under ship blocks and inside tanks. Powered by a 12VDC LED lamp this cost effective solution will make a huge difference in productivity.

Instead of guessing where they should blast, and consequently blasting areas already blasted, the operators will blast only in the correct areas; saving time, abrasive consumption and energy.

pt. no.	description

Nylon Nozzle Holder. Light weight, yet extremely tough, alpha-blast nylon nozzle holders provide quick and easy attachment of blast nozzles to the blast hose.

Precision injection moulding ensures very tight dimensional accuracy. Fitted with an internal raised thread the alpha-blast nylon nozzle holder fits tightly and securely to the blast hose. The combination of the internal raised thread and air pressure inside the blast hose ensures the nozzle holder will not disengage from the blast hose.

Being manufactured from a flexible nylon compound the nozzle holder will return to its original shape even after being knocked or accidentally impacted.

pt. no.	description
301104	Nylon Nozzle Holder #0 - 28mm (1.125") ID.
301056	Nylon Nozzle Holder #1 - 38mm (1.5") ID.
301057	Nylon Nozzle Holder #2 - 48mm (1.875") ID.
301058	Nylon Nozzle Holder #3 - 54mm (2.187") ID.

Aluminium Nozzle Holder. Light weight, yet extremely tough, alpha-blast aluminium nozzle holders provide quick and easy attachment of blast nozzles to the blast hose. Ideal for use where knocking or damage is likely to occur.

Precision cast alloy moulding ensures tight size accuracy. Fitted with an internal raised thread to ensure tight and secure fitting to the blast hose.

pt. no.	description
301060	Aluminium Nozzle Holder #1 - 38mm ID. Contractor.
301061	Aluminium Nozzle Holder #2 - 48mm ID. Contractor.
301062	Aluminium Nozzle Holder #3 - 54mm ID. Contractor.
301306	Aluminium Nozzle Holder #1/2 - 34mm ID. Fine.
301307	Aluminium Nozzle Holder #1 - 38mm ID. Fine.
301308	Aluminium Nozzle Holder #2 - 48mm ID. Fine.
301309	Aluminium Nozzle Holder #3 - 54mm ID. Fine.

Nylon Hose Coupling. Light weight, yet extremely tough, alpha-blast nylon hose couplings provide quick and easy attachment of the blast hose to the blast pot, or another blast hose.

Precision injection moulding ensures very tight dimensional accuracy. Fitted with an internal raised thread the alpha-blast nylon hose coupling fits tightly and securely to the blast hose. An integral spring locking pin locks into the mating coupling and prevents the couplings accidentally separating.

Being manufactured from a flexible nylon compound the hose coupling will return to its original shape even after being knocked or accidentally impacted.

<u>pt. no.</u>	<u>description</u>
301063	Nylon Hose Coupling #1 - 38mm (1.5") ID.
301064	Nylon Hose Coupling #2 - 48mm (1.875") ID.
301065	Nylon Hose Coupling #3 - 54mm (2.187") ID.

Metal Hose Coupling. The toughest of all couplings, alpha-blast metal hose couplings are available in a variety of materials to meet specific needs. Corrosion resistant gun metal provides excellent strength and service life for most general purpose applications.

In applications where the risk of explosion must be eliminated, as far as is possible, the alpha-blast brass couplings offer a non sparking solution.

<u>pt. no.</u>	<u>description</u>
301067	Gunmetal Hose Coupling #0 - 28mm (1.125") ID.
301068	Gunmetal Hose Coupling #1 - 38mm (1.5") ID.
301069	Gunmetal Hose Coupling #2 - 48mm (1.875") ID.
301070	Gunmetal Hose Coupling #3 - 54mm (2.187") ID.
301438	Steel Hose Coupling #1 - 38mm (1.5") ID.
301071	Steel Hose Coupling #2 - 48mm (1.875") ID.
301439	Steel Hose Coupling #3 - 54mm (2.187") ID.

Threaded Coupling. alpha-blast threaded couplings are available in a variety of materials to meet specific needs. When used in steel grit blasting applications the gun metal threaded couplings will provide maximum durability.

In applications where the risk of explosion must be eliminated, as far as is possible, the alpha-blast brass couplings offer a non sparking solution.

Precision investment casting to ensure quality repeatability with CNC machined internal threads with safety pin holes.

pt. no.	description
301072	Mini Gunmetal Threaded Coupling - 0.5" BSP.
301073	Gunmetal Threaded Coupling - 1.25" BSP.
301074	Gunmetal Threaded Coupling - 1.5" BSP.
301223	Steel Threaded Coupling - 1.25" BSP.
301440	Steel Threaded Coupling - 1.5" BSP.

Air Hose Fittings. Inadequately secured or loose compressed air hoses are dangerous to operators, and air leaks waste money. Most cases of blown off air hoses are caused by the use of cheap inferior quality clamps and hose tails that are not up to the job required for blast cleaning.

Hose tails are fitted with a ring groove for the clamp to lock into to prevent the hose pulling off.

pt. no.	description
301236	hose tail 0.75"
301237	hose tail 1"
301238	hose tail 1.25"
301239	hose tail 1.5"
301241	hose clamp 0.75"
301242	hose clamp 1"
301243	hose clamp 1"
301244	hose clamp 1.5

Tungsten Carbide Nozzle. Recognised as the industry standard for general blasting applications alpha-blast tungsten venturi nozzles are extremely durable for use in applications where rough handling is unavoidable, providing maximum resistance to impact or flexing.

alpha-blast tungsten carbide long venturi nozzles are particularly suitable for use with steel abrasives, expendable slag abrasives and crushed glass.

The wide throat entry design increases productivity by up to 15% compared to standard venturi nozzles.

Available encased in a tough aluminium jacket or protected by soft shock absorbing nylon jacket that allows easy access into and out of the nozzle holder. Fitted with 50mm contractor thread.

<u>pt. no.</u>	<u>description</u>
301175	#3 Tungsten Carbide Aluminium Jacket 4.8 mm bore
301075	#4 Tungsten Carbide Aluminium Jacket 6.4 mm bore
301076	#5 Tungsten Carbide Aluminium Jacket 8 mm bore
301077	#6 Tungsten Carbide Aluminium Jacket 9.5 mm bore
301078	#7 Tungsten Carbide Aluminium Jacket 11 mm bore
301079	#8 Tungsten Carbide Aluminium Jacket 12.7 mm bore
301176	#10 Tungsten Carbide Aluminium Jacket 16 mm bore
301177	#12 Tungsten Carbide Aluminium Jacket 19 mm bore
301140	#3 Tungsten Carbide Nylon Jacket 4.8 mm bore
301141	#4 Tungsten Carbide Nylon Jacket 6.4 mm bore
301142	#5 Tungsten Carbide Nylon Jacket 8 mm bore

301144	#7 Tungsten Carbide Nylon Jacket 11 mm bore
301145	#8 Tungsten Carbide Nylon Jacket 12.7 mm bore

MADE IN BRITAIN

Silicon Carbide Nozzle. Silicon carbide venturi nozzles offer a longer lasting light weight alternative to tungsten carbide. The 50% weight reduction relieves operator fatigue and provides higher productivity.

alpha-blast silicon venturi nozzles are particularly suitable for use with steel abrasives, expendable slag abrasives, garnet and crushed glass.

The wide throat entry design increases productivity by up to 15% compared to standard venturi nozzles.

Encased in a tough shock absorbing nylon jacket that allows easy access into and out of the nozzle holder. Fitted with 50mm contractor thread.

<u>pt. no.</u>	<u>description</u>
301148	#3 Silicon Carbide Nylon Jacket 4.8 mm bore
301149	#4 Silicon Carbide Nylon Jacket 6.4 mm bore
301150	#5 Silicon Carbide Nylon Jacket 8 mm bore
301151	#6 Silicon Carbide Nylon Jacket 9.5 mm bore
301152	#7 Silicon Carbide Nylon Jacket 11 mm bore
301153	#8 Silicon Carbide Nylon Jacket 12.7 mm bore

Angle Nozzle. alpha-blast angle nozzles are designed to increase productivity in inaccessible and hard to reach areas, ie behind beams, inside pipes, around lattice etc.

Instead of depending on rebounding and ricocheting abrasive to reach the inaccessible areas the use of alpha-blast angle nozzles allows the operator to blast directly onto the part. This increases blasting speed and also produces the correct surface profile.

The durable combination of a tungsten carbide liner and 50mm contractor thread aluminium outer jacket ensures the angle nozzle is not easily damaged whilst in use.

pt. no.	description
301197	#2 Single Outlet Angle Nozzle 3.2 mm bore
301198	#3 Single Outlet Angle Nozzle 4.8 mm bore
301299	#4 Single Outlet Angle Nozzle 6.4 mm bore
301200	#5 Single Outlet Angle Nozzle 8 mm bore
301201	#6 Single Outlet Angle Nozzle 9.5 mm bore
301203	#2 Double Outlet Angle Nozzle 3.2 mm bore
301204	#3 Double Outlet Angle Nozzle 4.8 mm bore
301205	#4 Double Outlet Angle Nozzle 6.4 mm bore
301206	#5 Double Outlet Angle Nozzle 8 mm bore
301207	#6 Double Outlet Angle Nozzle 9.5 mm bore
301209	#2 Triple Outlet Angle Nozzle 3.2 mm bore
301210	#3 Triple Outlet Angle Nozzle 4.8 mm bore
301211	#4 Triple Outlet Angle Nozzle 6.4 mm bore
301212	#5 Triple Outlet Angle Nozzle 8 mm bore
301213	#6 Triple Outlet Angle Nozzle 9.5 mm bore

Short Venturi Nozzle. alpha-blast short venturi nozzles are designed to increase productivity when blasting items with difficult to reach areas or containing a small surface area, ie railings, pipes, small fabrications, inside cavities etc.

By directing a concentrated stream of high velocity abrasive directly onto the work piece surface the blasting speed is increased as all the abrasive hits the work piece instead of large amounts missing the part.

Fitted with tungsten carbide liner and 50mm thread.

pt. no.	description
301178	#3 Tungsten Carbide Short Venturi 4.8 mm bore
301179	#4 Tungsten Carbide Short Venturi 6.4 mm bore
301180	#5 Tungsten Carbide Short Venturi 8 mm bore
301181	#6 Tungsten Carbide Short Venturi 9.5 mm bore
301182	#7 Tungsten Carbide Short Venturi 11 mm bore
301183	#8 Tungsten Carbide Short Venturi 12.7 mm bore

Water Jacket Nozzle. Abrasive blasting with expendable abrasives can produce huge amounts of dust. This is a problem for the environment and surrounding neighbours and workers.

You can easily reduce the dust levels by 80-90% by using the alpha-blast Water Jacket Nozzle. Simply connect a low pressure mains or tank water supply hose to the rear of the nozzle. The water mixes with the exiting air and abrasive mixture and forms a dust suppressing slurry.

Fitted with extremely durable tungsten carbide venturi liner encased in a tough aluminium jacket and fitted with 50mm contractor thread.

pt. no.	description
301311	#4 Aluminium Jacket Waterjet Nozzle 6.4mm bore
301312	#5 Aluminium Jacket Waterjet Nozzle 8mm bore
301313	#6 Aluminium Jacket Waterjet Nozzle 9.5mm bore
301314	#8 Aluminium Jacket Waterjet Nozzle 12.7mm bore

Short Straight Nozzle. For use in pressure or suction cabinets as a longer lasting alternative to ceramic nozzles. Tungsten carbide inner liner provides excellent wear resistance and longer life.

Suitable for use with light weight 13mm ID blast hose to provide an easy to handle pressure blast for small touch up and blasting small areas, hand rails, weld seams etc.

Fitted with NPSM fine thread and aluminium jacket.

pt. no.	description
301185	#2 Tungsten Carbide Short Straight 3.2 mm bore
301186	#3 Tungsten Carbide Short Straight 4.8 mm bore
301187	#4 Tungsten Carbide Short Straight 6.4 mm bore
301188	#5 Tungsten Carbide Short Straight 8 mm bore
301189	#6 Tungsten Carbide Short Straight 9.5 mm bore
301190	#8 Tungsten Carbide Short Straight 12.7 mm bore

Standard Blast Hose. Standard heavy wall blast hose manufactured from a tough abrasive resistant natural rubber inner liner for maximum blast hose life. Anti static compound dissipates static from the hose.

Working pressure 10 bar / Bursting pressure 30 bar.

Tough outer wrapping prevents damage to the hose even when used in the most demanding environments such as shipyards and construction work sites.

<u>pt. no.</u>	<u>description</u>
301042	Standard Blast Hose 13mm ID x 34mm OD - 20m
301372	Standard Blast Hose 19mm ID x 38mm OD - 20m
301043	Standard Blast Hose 25mm ID x 48mm OD - 20m
301045	Standard Blast Hose 32mm ID x 55mm OD - 20m
301047	Standard Blast Hose 38mm ID x 58mm OD - 20m

Light Weight Blast Hose. Reduce operator fatigue and increase productivity by using our Light Weight range of blast hoses. Approx. 30% lighter than standard hose this hose will allow operators to blast longer and reduce tiredness. Manufactured from a tough abrasive resistant natural rubber inner liner for maximum blast hose life. Anti static compound dissipates static from the hose.

Working pressure 10 bar / Bursting pressure 30 bar.

Tough outer wrapping prevents damage to the hose even when used in the most demanding environments such as shipyards and construction work sites.

CE

Moisture Separator. Always a problem for blasting operations is the presence of moisture in the compressed air supply.

This will lead to flash rusting on the blasted surface and clogging of the abrasive inside the blast pots. The alpha-blast moisture separator will remove a large amount of the moisture from the compressed air stream and prevent a lot of these problems. Containing no moving or replaceable parts this moisture separator will provide years of trouble and maintenance free service. The moisture separator is fitted with auto drain valve for automatic discharge of the collected moisture.

pt. no.	description

301370	4 Outlet Air Receiver

CE

DryzaBlast Moisture Separator is suitable as a basic last line of defence moisture trap. Compressed air enters the lower port and passes through a stainless steel wire wool filter media.

This media entraps suspended moisture particles and removes them from the air flow. Removed moisture drops to the bottom of the separator and is manually drained.

Fitted with large inlet and outlet ports the unit may also be used as a compressed air distribution receiver. Units are CE Marked.

NOVA 3 Blasting Helmet. The RPB® Nova 3® series respirator combines breakthrough protection technology with advanced comfort & functionality, surpassing even the most rigorous industry standards and the demands of the most quality-conscious companies. Designed to optimize safety and productivity, and to minimize worker downtime, the helmet has many features that maximize its lifetime value.

Safety Above All Else. Rigorous safety standards not only protect valued workers, they also maximize efficiency, and maintain companies' hard-earned reputations as suppliers and employers. RPB® tested the Nova 3® using all conventional safety testing. Meets standards worldwide, including NIOSH, ANSI Z87.1 - 2010+, ANSI Z89.1 - 2012 Type 1 Class C. Then they parked a large sports utility vehicle on top of it. It's that uncompromising approach that characterizes RPB®'s design and the high standards and ethics they set in everything they do. Because jobs and lives depend on their products; RPB® make certain they won't let anyone down.

Comfortable kit - clear thinking. The RPB® Nova 3®'s design and engineering distributes the helmet's weight evenly across the head and shoulders for optimum comfort, practicality, and ease of worker movement, reducing fatigue. In addition, a ratchet-adjusted neck pad ensures your head is supported. The ingenious, fully adjustable, internal "Clever Fit Padding" (patent pending) allows helmets to be individually customized. This avoids discomfort and irritation, giving workers a clear head even under the pressures of their work. The padding has a second, vital, purpose. It's positioned to help absorb sound within the helmet, protecting workers' hearing. Padding is easily removed, and fully machine washable, making helmets hygienic and pleasant to wear even in the most extreme temperatures.

NOVA 2000 Blasting Helmet. Using the Nova 2000 you'll enjoy more comfort, less fatigue and improved productivity. This revolutionary helmet is in a class of its own, and has been designed to provide the blaster a comfortable and pleasant working environment with lighter weight and enhanced visibility. Once tried there is no going back.

Super tough helmet shell made of high density polyethylene, U.V. Stabilized and characteristically abrasion resistant.

Evenflow™ Air Distribution diffuses an even flow of breathing air throughout the helmet to cool head and face. Prevents lens from clogging.

ComfortZone™ lightweight pillow foam padding ensures the helmet always sits comfortably on head. The padding is easily removed for hygienic cleaning.

Large double lens provides optimum vision without irritating sideglare.

Rugged removable face frame mounted on an integral moulded hinge and secured with a super strong latch.

Multi layer sound deadening foam significantly reduces noise levels inside helmet.

Strongly attached cape fitted with 8 studs ensures cape stays on.

Abrasion resistant cape cover band seals the cape and prevents abrasive from entering the helmet

Optional low flow indicator allows the wearer to check that the airflow is sufficient to provide the necessary respiratory protection.

Safety Approvals include: NIOSH, AS/NZS1716:2000, ANSI Z87.1-03+, ANSI Z89.1-1997, EN:166:2002, AS/NZS1337:1992

Astro Blasting Helmet. The Astro is the number one choice for an economy abrasive blasting helmet which also meets safety standards worldwide including Europe, USA and Australia. This lightweight yet robust helmet will reduce fatigue, reduce downtime replacing parts and increase your productivity.

Lightweight yet robust helmet. Less weight means less fatigue. The helmet only weighs 1.3kg.

Unique high strength Visor Strap keeps tension on the visor and is easy to use even when wearing blasting gloves.

Removable head suspension for ease of cleaning inside the helmet.

Sturdy removable face frame mounted on an integral moulded hinge and secured with a super strong latch.

Large flat lens provides excellent vision without distortion. Lower cost replacement lenses.

Durable nylon cape protects the wearers neck and upper body and the soft inner collar provides a comfortable seal around the neck.

Replaceable Cape Cover Band seals the top of the cape and stops abrasive entering the helmet.

All parts easily replaced with conventional tools.

Flexible breathing tube silences the incoming air supply and provides a quiet working environment.

Optional low flow indicator allows the wearer to check that the airflow is sufficient to provide the necessary respiratory protection.

Safety Approvals include: NIOSH, EN271, AS/NZS1716:2003

Eye Protection. The T100™ offers the option of ANSI Z87.1+ High Velocity impact protection.

T100 Series Respirator. The RPB® T100 SERIES™ respirator is designed to offer light-weight, economical protection for workers in specialist industries including spray painting and chemical handling. It is a NIOSH approved type C respirator.

Over 100 years of market experience has gone into the development, ensuring optimum safety, quality and performance - reducing downtime. THE RPB® T100 SERIES™ comes in three versions. The T100™ (standard hood), the T100 PLUS™ (with extra length bib) and the T100 ULTRA™ (extra length bib, DuPont Tychem® SL Material with sealed seams).

Safety Above All Else. The T100™ supplied air respirator, manufactured from DuPont® Tychem® is a lightweight hood offering superior comfort compared with a conventional, tight full-face respirator. The hood also protects the entire head of the operator eliminating the need for a head sock. The wide angle lens offers optimum vision to set a clear view of the job.

The T100™ has been designed to be robust enough to reuse but cost effective enough to discard after use.

Applications

- Spray painting and coating applications - Pharmaceutical Manufacturing - Chemical handling

RPB carbon monoxide monitor designed for detecting carbon monoxide in the operators breathing air supply.

Upon detection of excess carbon monoxide the monitor will sound a buzzer.

Incased in a tough polypropylene case. The front panel is a mylar film to withstand the harsh conditions. Control buttons are tactile and will withstand 1,000,000 presses.

The step-by-step calibration is totally fail-safe. Operators press CAL CHECK, then OK to be stepped through the Calibration Check. The calibration is stored in the onboard memory and changes can only be made by a factory-approved technician.

Radex Breathing Air Filter. The Radex Airline Filter System offers more capacity, more filtration and more versatility. Can be floor or wall mounted with same mounting bracket. Large capacity 6 stage filter cartridge removes moisture and particulates to 0.5 micron and odor from the compressed air providing the operator with clean breathable air. Large range of optional equipment allows the filter to be configured to meet specific breathing air requirements.

pt. no.	description
04-900	Radex Airline Filter Complete
04-906	Radex Airline Filter Complete - 6 Operator

Cold Air Tube. The Cold Air Tube Assembly cools compressed breathing air coming into respirators by as much as 32°F (18°C). The Cold Air Tube helps to maximise worker comfort and increase productivity whilst working in hot climates. The Cold Air Tube is fitted with an airflow regulator which allows the user to adjust the outgoing air temperature.

Easy to disassemble and clean and manufactured from non toxic engineering plastic which provides an extremely robust construction to withstand the rigors of the workplace.

pt. no.	description
4000-01	Cold Air Tube Assembly

Hot Air Tube. The Hot Air Tube Assembly warms compressed breathing air coming into respirators by as much as 30°F (17°C). The Hot Air Tube helps to maximise worker comfort and increase productivity whilst working in cold climates. The Hot Air Tube is fitted with an airflow regulator which allows the user to adjust the outgoing air temperature.

Easy to disassemble and clean and manufactured from non toxic engineering plastic which provides an extremely robust construction to withstand the rigors of the workplace.

pt. no.	description
4000-20	Hot Air Tube Assembly

RPB Breathing Air Line. Breathing air lines to match all RPB air control, cool and hot air tubes. Used in conjunction with RPB supplied air respirators as part of NIOSH approved system.

pt. no.	description
NV2027	100' Breathing Air Supply Line - RPB
NV2028	25' Breathing Air Supply Line - RPB
NV2029	50' Breathing Air Supply Line - RPB

RPB Air Filter Cartridges. RPB Air Filter Cartridges can offer extended filter life. Quality filtration materials which are manufactured to exacting standards ensure the most efficient and effective filtration in every cartridge.

Materials with greater surface area provide increased absorption of water, oils and odors. The natural fibre felts very efficiently absorb oils from the air stream allowing air to flow through to the further stages of moisture and odor removal.

pt. no.	description
APF3100	Replacement Filter Cartridge (Radex)
AFC100	Replacement Filter Cartridge (Generic)

A2B Blast Helmet. The A2B Blasting Helmet is comfortable due to its light weight. The adjustable head harness allows for easy adjustment to suit any head size. The harness is removable to allow easy cleaning.

Operators are protected from flying abrasives by 1mm thick polycarbonate window. To prevent abrasive damage to the window it is protected by 0.3mm thick disposable lenses. The large flat window provides ample viewing area without any distortion from curved windows. Tough cotton cape protects operators upper body from rebounding abrasives.

Air feed to the helmet is from breathing air filter and passes through sound reducing hose. Foam lining inside the helmet distribute the incoming airflow.

All parts for the A2B Blasting Helmet are cheap and easy to replace.

<u>pt. no.</u>	<u>description</u>

501026	Filter Cartridge - Top Flange Type

Breathing Air Line. This air line is specifically made for breathing air; it is not regular compressed air line. Quick couplings attached to hose with stainless steel swaged fitting.

alpha-blast Breathing air line made in Australia and complies with AS/NZS1716 2299.

<u>pt. no.</u>	<u>description</u>
501022	10m Breathing Air Supply Line - alpha-blast
501023	20m Breathing Air Supply Line - alpha-blast
501024	40m Breathing Air Supply Line - alpha-blast

Blasting Suit. alpha-blast Blasting Suits are designed to protect operators from injury caused by ricocheting abrasives. Areas exposed to rebounding abrasives such as the front of the arms and legs are made from tough durable leather. The chest area, that is covered by the helmet cape, and the back of the blasting suit are made from heavy duty cotton material. This reduces the weight and prevents the operator becoming too hot.

A nylon/cotton version is produced for use in applications using softer abrasives such as plastic media, glass beads, walnut shell, bicarb etc.

Double layer poppers and velcro keeps abrasive out.

Hi-Vis Cape. The alpha-blast Hi-Vis cape was originally developed for blasters working on sites where the wearing of a high visibility jacket is compulsory. A great safety device also for use where there are many blasters working closely together and there is a likelihood of blasters accidentally blasting each other.

The Hi-Vis cape can be made to suit all types of blasting helmet and is available in a variety of colours.

Contact us for further details or specific requirements.

<u>pt. no.</u>	<u>description</u>
501027	HiVis Cape Yellow

outer lens 0.5mm

inner lens 1mm

Helmet Lenses. We produce a variety inner and outer lenses to suit many different blasting helmets.

Lenses are manufactured from 0.5 and 1mm thick high grade polycarbonate produced in Japan. Material is crystal clear and does not contain any waviness that causes operator fatigue.

Lenses are pre packaged into packets of 10, 20, 50 or 100 pieces per packet. Each lens is protected both sides by layer of protective PE material.

Contact us for further details or specific requirements.

Aluminium Cool Air Tube. The alpha-blast aluminium air cooler is used to cool the incoming hot air supply from the compressor prior to it entering the helmet. The cooler will reduce the temperature of the incoming air supply up to 32°F (18°C). This cooler incoming air ensures maximum operator comfort in hot climates. When the blaster is comfortable productivity increases.

Manufactured from a tough aluminium extrusion to provide extended life.

<u>pt. no.</u>	<u>description</u>
501034	Aluminium Cool Air Tube

Blasting Pot. The alpha-blast range of blast pots combines our 80 years of experience in the blast cleaning industry to produce a high production, reliable and operator safe blasting system guaranteed to increase your productivity and profitability on every project.

alpha-blast intelligent design concepts and attention to detail provide a fully featured blasting system at real value for money pricing.

Productivity - Achieve maximum production rates and faster throughput rates, all alpha-blast pots are fitted with full flow 1-1/4" valves, piping and fittings to maintain maximum blasting pressure at the nozzle.

Cost saving - Metering exactly the right amount of abrasive to the nozzle ensures maximum productivity with minimal abrasive cost. The infinitely adjustable Abrasive Saver Valve allows precise abrasive flow rate to the nozzle to ensure no wasted abrasive.

Safety - Avoid serious accidents with blown off hoses. All hoses are connected with forged steel 4 bolt clamps connected to hose tails with locking grooves. This combination is almost impossible to break apart. All hose fittings are precision machined steel forgings, no cheap monkey metal fittings on this pot.

Low load height - alpha-blast pots are designed with the operators safety and comfort in mind. The low loading height reduces the possibility of back strain when manually refilling with abrasive. Heavy duty lifting lugs and over-size wheels permit easy lifting and relocating of the pot.

Reliability - Durable high quality components are used throughout the pot assembly and the high flow combination inlet/outlet remote control valve is protected by non-return valve to ensure trouble free service. All valve service kits are inexpensive and easy to fit when servicing is required.

SuperFlow Blasting Pot. Conventional blast pots are fitted with 90 degree lower cone. The SuperFlow design is 120 degree steep lower cone. This increased angle of the lower cone provides a more consistent abrasive flow to the metering valve and ensures the pot is suitable for all abrasive types. Even the finest of abrasives ie, garnet, glass beads, sodium bicarbonate etc, will flow smoothly and uninterrupted.

Ease of Maintenance. Control and abrasive metering valving are mounted to bolt on/off flanges. The valves are quickly, easily and safely removed from the blast pot as and when maintenance is required. Only basic hand tools required for servicing. No more tiny hand hole to squeeze into to service pop up valve and seating ring. Removable bolt on seating ring housing permits full access to the blast pot interior. Replacing pop up valve and seating ring has never been easier.

Safety. Rigid support frame and over size wheels allows the SuperFlow blast pot to be easily moved and firmly positioned. With the fully removable seating ring housing confined space and access issues are totally eliminated.

Productivity. Achieve maximum production rates and faster throughput rates, all alpha-blast pots are fitted with full flow 1-1/4" valves, piping and fittings to maintain maximum blasting pressure at the nozzle.

Reliability. Durable high quality components are used throughout the pot assembly and the high flow Compact Remote Valve provides trouble free service. All valve service kits are inexpensive and easy to fit when servicing is required.

Note. Picture includes optional items; access platform, loading hopper, maintenance winch.

FatBoy Blasting Pot. The alpha-blast FatBoy range of blast pots have been developed specifically to increase blasting productivity in open blast work sites using consumable abrasives. Available in three standard sizes, the FatBoy blasting pots are sized for 1, 2 or 4 metric tonnes of garnet abrasive. The pressure hold design of the system allows each operator to have independent control for starting and stopping blasting. An abrasive blow down function may also be incorporated if required.

To aid in transportation and relocation the Fatboy range is fitted with heavy duty lifting lugs and are skid mounted to permit moving by forklift.

Full flow pneumatic fittings used throughout the system ensure minimal compressed air pressure loss. This results in higher pressure at the nozzle and consequently higher blasting speeds and lower abrasive consumption.

375 Series Blasting Pot. The alpha-blast ABP-375 Series has a storage capacity of 400 litres to provide additional blasting times before stopping to refill with abrasives.

375 Series blasting pots can be fitted with 1 or 2 outlets and can be configured as pressure hold or pressure relief systems. The pressure hold design of the system allows each operator to have independent control for starting and stopping blasting. An abrasive blow down function may also be incorporated if required.

Full flow pneumatic fittings used throughout the system ensure minimal compressed air pressure loss. This results in higher pressure at the nozzle and consequently higher blasting speeds and lower abrasive consumption.

Double Chamber Blasting Pot. The alpha-blast double chamber blast pot is designed to provide continuous blasting. May be used on automatic blasting cabinets or for open blasting. When used on automated cabinets the pot is fitted with abrasive level probes to trigger automatic reloading. When used for open blasting the pot is fitted with timers to circulate the top chamber.

The double chamber pots can be fitted with 1, 2, 4, or 6 outlets. The outlets may be operated independent of each other.

Full flow pneumatic fittings used throughout the system ensure minimal compressed air pressure loss. This results in higher pressure at the nozzle and consequently higher blasting speeds and lower abrasive consumption.

	Package B for #20 Blast Pots
201014	13mm x 28mm blast hose, gun metal hose coupling, nylon nozzle holder, #4 tungsten carbide straight nozzle
	Package B for #50/100/200 Blast Pots
201015	32mm x 48mm blast hose, steel hose coupling, nylon nozzle holder, #6 tungsten carbide venturi nozzle
	Standard Package C for #20 Blast Pots
201058	A2B breathing air filter, 10m alpha-blast breathing air hose, A2B blasting helmet, aluminium cool air tube, leather/cotton blasting suit, blasting gloves
	Standard Package C for #50/100/200 Blast Pots
201059	A2B breathing air filter, 20m alpha-blast breathing air hose, A2B blasting helmet, aluminium cool air tube, leather/cotton blasting suit, blasting gloves
	Premium Package C for #20 Blast Pots
201018	Radex breathing air filter, 25' RPB breathing air hose, NOVA2000 blasting helmet, cool air tube, leather/cotton blasting suit, blasting gloves
	Premium Package C for #50/100/200 Blast Pots
201019	Radex breathing air filter, 50' RPB breathing air hose, NOVA2000 blasting helmet, cool air tube, leather/cotton blasting suit, blasting gloves

Portable Ventilator. The Porta-Blast Portable Ventilator is a convenient movable fan suitable for local ventilation of enclosed blasting areas.

The unit can be placed directly in the work area, or outside and ducted to the working area.

The Portable Ventilator is 500mm diameter and is available with air or electric driven fan.

Single phase motor produces approx. 5,000cfm and three phase motor produced approx. 8,000cfm.

A washable dust sock suitable for capture of nuisance dust is available as optional accessory.

801012	Porta-Blast Dust Hose 600mm dia 7.5m long

DryzaBlast Compressed Air Treatment Systems utilise a three stage action to remove moisture from the air. Firstly the compressed air is passed through a pre-separator to remove any water droplets. The air is then cooled through a radiator fitted with pneumatically driven fan. As the air temperature reduces the moisture vapour in the air forms liquid droplets and drops out of suspension.

The final moisture removal stage in After Cooler is through stainless steel wire wool. In the Drier it is through re-chargable deliquescent capsules. Once saturated these capsules may be removed from the vessel and dried in oven or sun ready for reuse.

DryzaBlast Compressed Air Treatment Radiator after cooler is an air driven system designed to cool compressed air and remove liquified moisture. Simple operation utilizes an air driven fan to cool air passing through radiator.

Removed moisture is automatically discharge.

Painttechnik ATLAS Airless Sprayer. For every project size there is a Painttechnik ATLAS Airless Sprayer suitable for the job. Shipyards, steel fabrication, oil and gas construction, bulk oil tanks etc. can all be coated quickly and without breakdown delay.

Heavy duty, durable and reliable, Painttechnik ATLAS Airless Sprayers are built to get your coating job finished on time and on budget.

Fitted with the newest technology 10" air motor for higher pressure ratio and flow rates to handle extremely viscous fluids. Simple maintenance on fluid section.

2K Gun

The **Painttechnik Plural Component Sprayer** is used for mixing 2 liquid components at the gun immediately before spraying.

Types of coating used include:
Plural component materials, Protective coatings,
Foam insulation, Polyurethane Foam, Polyurea,
Epoxies, Acid catalyzed wood finishing, Stains,
lacquers and varnishes, Sealants and Adhesives

The Plural pumps are available in mixing ratios of 1:1, 2:1 and 3:1. Unlimited variety of pressures are available.

2k gun offers immediate air flushing after spraying for instant gun cleaning.

Optional items to make a complete setup include: drum heaters, agitators, hose heaters and transfer pumps.

POA. Contact us for pricing based on setup required.

The **Painttechnik** Pneumatic Pressure Tank is multi functional and highly portable for flexible operations in tough environments with limited space.

Fitted with an M0701 air motor to provide more power and durable working time. Quick and easy clean-up. Tough construction allows for use with all materials. For high corrosive materials tank is lined with stainless steel. Provides uniform fluid pressure delivery.

pt. no.	description
901015	Pneumatic Pressure Tank 10L with inner tank, Inlet regulator, 6m coupled air and fluid hoses. Vane air motor agitator with three blade aluminum propeller. Without gun.
901016	Pneumatic Pressure Tank 20L with inner tank, Inlet regulator, 6m coupled air and fluid hoses. Vane air motor agitator with three blade aluminum propeller. Without gun.
901021	Painttechnik Pneumatic Pressure Tank 10L with inner tank, Inlet regulator, 6m coupled air and fluid hoses. Without agitator.
901022	Painttechnik Pneumatic Pressure Tank 20L with inner tank, Inlet regulator, 6m coupled air and fluid hoses. Without agitator.
901023	Painttechnik Pneumatic Pressure Tank 10L Type G. Without agitator and hose.
AH132303	ANI AT/SP Pressure Paint Gun for industrial coating 1.5mm nozzle tip, in Box with service spanner.

Painttechnik Pneumatic Agitator ensures painting quality by thorough mixing and better particle dispersion in your mix tank or throughout the whole painting system.

Fitted with vane-type air motor with power 0.9 HP produces up to 3 N/m.

Abrasive Recycling System.

If you are blasting in a shed with garnet or slag abrasives you can save a fortune in abrasive costs by installing an abrasive recycling system.

This unit is designed for use with Dura-Grit steel grit.

This abrasive can be recycled hundreds of times and will provide perfectly cleaned surfaces at the right profile height.

Average Dura-Grit consumption is only 0.5kg/m² (0.1lb/ft²).

After blasting, simply recover the abrasive into the loading hopper and the system will recycle the grit to remove all over and under sized waste.

Perfectly cleaned abrasive is deposited into 20MT storage hopper ready for reuse.

Recycle until the abrasive eventually becomes dust.

System consists of:

- Loading hopper. Recessed into floor pit, or mounted on top of floor.
- 7.5 tonne steel grit per hour bucket elevator.
- Rotary screen for removal of oversized waste.
- Airwash separator for removal of dust from good reusable abrasive.
- Abrasive storage hopper with 20 tonne steel grit capacity and butterfly outlets for 4 blast pots.
- Maintenance/adjustment ladder, platform and guard rails.
- Electrical control panel.
- Optional recovery dust collector.

pt. no.	description

Scorpion Blast Cabinet

Operator friendly and environmentally safe Scorpion Blast cabinets are designed and built tough for high productivity continuous abrasive blasting or shot peening.

This innovatively designed blast cabinet combines a unique Tru Downflow dust collector, with a compact one piece blasting cabinet layout, to provide a blast cabinet with unparalleled performance and minimal floor space requirements.

The Scorpion Blast cabinet is available in suction and pressure configurations. A range of work handling and automation options permit customization to meet virtually any surface preparation, finishing and impact peening requirements.

Blow Off Gun

EVR Vacuum Recovery Units offer the right solution for recovering and conveying of blast media.

In inaccessible or enclosed areas such as storage tanks, box girder constructions, tank internals at shipyards etc., the equipment offers great savings in time and manpower. EVR Vacuum system cuts costs by reducing cleanup time and reclaiming valuable materials.

The heart of the EVR unit is the robust AERZEN German manufactured high efficiency rotary vacuum producer.

Vacuum power range 7.5 - 90kw. EVR units are configured for disposal of waste grits or recycling of reusable abrasives.

Dehumidifier reduce blastroom or enclosure relative humidity levels to prevent flash rusting between blasting and painting. Robust design with steel frame, eyebolts etc. Vital parts can easily be maintained and exchanged. Pre-cooled and after-cooled versions for warm climates. Units are suitable for indoor and outdoor use.

The Blasttechnik regenerative dehumidifier contains a permanently rotating silica gel wheel. As fresh air is passed through a portion of the wheel, the moisture is removed from the air and absorbed by the silica gel. Dried air is discharged to the enclosure. The silica gel wheel is regenerated continuously and automatically.

Available in sizes from 1.000m³/h to 25.000m³/h dry air.

Easy-Vac Recovery Unit. Work site clean up of spent abrasive and waste is easily accomplished with the Easy-Vac vacuum recovery system. As the unit is fully air driven no electric power is required. This is particularly useful on work sites where sources of potential explosion ignition must be eliminated such as oil refineries, oil and gas storage depots etc.

The vacuum recovery airflow is generated by a pneumatically powered eductor pump. The eductor pump is powered by the same air supply used for blasting. The recovered abrasive, dust and debris is pneumatically conveyed through recovery vacuum hose into a fully adjustable airwash that separates good reusable abrasive from waste and dust. After collection, the abrasive is stored in a 3mt abrasive storage hopper prior to recirculating to blast pot.

Before exiting to the atmosphere the recovery airflow is passed through a 2 cartridge TDF dust collector to capture the separated dust. Waste dust is deposited into a waste collector drum prior to disposal.

The Easy-Vac is inexpensive to buy and is very simple to use and maintain as it contains no moving parts.

www.blastrooms.com

 **Blasttechnik Blastrooms** We offer a selection of blastrooms designed and built for specific applications, including blastrooms for blasting steel fabrications, ship blocks and wind towers; blastrooms for blasting with steel abrasives, plastic media, garnet and non ferrous abrasives, as well as portable, dual abrasive and combination blast and paint rooms.

Our range of high quality, dependable and innovative blastrooms provide a fully sealed blasting enclosure to perform abrasive blasting, grit blasting, bead blasting and surface preparation and finishing operations.

www.giant-doors.com

SHIPYARDDOOR Shipyarddoors® are suitable for accessing very large industrial buildings. Owners and users of Shipyard blast and paint rooms, Aircraft hangers, Mining maintenance workshops, Aircraft storage facilities and Industrial and boat fabrication buildings will benefit from this fold-up door technology.

The vertically opening door is light weight, wind resistant and fast operating.

Shipyarddoor® have been manufacturing fabric fold-up hangar doors since 2001. Their reliable and high quality door solutions have been installed and accepted world wide.

www.painttechnik.com

 **Painttechnik Spray Booths** Structural steel fabrications, cars, buses, ship sections, aircraft and aircraft components.

There is a Painttechnik spray booth for whatever you need to paint.

We manufacture and distribute spray painting, operator safety and painting ventilation equipment, all designed and selected to give you the finest paint finishes without harm to painters or the environment.

www.porta-blast.com

The Porta-Blast is a plug and play, all in one temporary blast and paint enclosure, built from shipping containers and canopy shelter.

Instead of creating a huge mess, or transporting your parts around, you can now set up a blasting and painting facility wherever you need it.

Erection of the complete facility is simple and quick. All parts are made light weight to allow installers to hand carry and erect.

www.bnp.com.sg/blastrac

BLASTRAC Blastrac enclosed shot blasting system is the most effective and environmentally friendly methods of removing paint, coatings, non skid and other contaminants from steel surfaces.

Blastrac equipment uses steel shot and angular steel grit, or a mixture of the two in a variety of sizes allowing the operator to achieve a wide range of anchor profiles needed for almost any type of coating application.

We are an authorised distributor of Blastrac.

www.bnp.com.sg

Blast & Peen Abrasives. We sell a multitude of different blasting abrasives. However our speciality is the products we produce ourselves which are cut wire and zinc shot. Cut wire is produced from either carbon steel, stainless steel, aluminium, copper or zinc.

If used for shot peening our cut wire is produced to meet all the common automotive and aerospace specifications.

Our carbon steel cut wire is an economical alternative to cast steel shot due to the greatly increased life of cut wire versus cast steel.

www.coulsoniceblast.com

COULSON
ICE BLAST

There are so many different industrial blasting methods and applications.

Coulson Ice Blast likes to keep things simple. Get a bag of ice cubes from the local gas station, toss them into the machine, point the nozzle at the surface you want to clean and pull the trigger. Doesn't get much simpler than that.

Ice is a non-hazardous material and will significantly reduce airborne contaminate levels and operating costs.

We are an authorised distributor of Coulson Ice Blast.
